

Food Web Project

Objective: You will create an ecosystem found in the U.S. and answer questions that support your ecosystem.

Requirements:

1. You must research to find organisms that live in either of the following environments:

You must first select an ecosystem of the United States. Some examples of ecosystems in the US may include:

- a. **Ocean Ecosystem** (Example: organisms that might live in the Atlantic or Pacific Oceans)
- b. **Desert Ecosystem** (organisms that might live in a desert)
- c. **Forest Ecosystem** (organisms that might live in a forest, such as an Ohio forest)
- d. **Prairie Ecosystem** (organisms you would find on a prairie)
- e. **Polar Ecosystem** (organisms you might find in a cold ecosystem, like Alaska!)

Selected Region: _____

2. Next you must make sure to include organisms from each of the following categories:
 - a. **Producers (at least 3)**
 - b. **Consumers (at least 7)** Can be a combination of primary, secondary, etc.
 - c. **Decomposers (at least 2)**
